

PARV AGARWAL

AI Product Engineer — Agentic Systems, RAG & Production LLM Deployments

Bengaluru, Karnataka, India | +91 8126187270 | parvagarwal73@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY

AI Product Engineer with hands-on experience owning a live, voice-enabled agentic tutoring platform end-to-end — from architecture and FastAPI backend to multi-agent orchestration (LangGraph, LangChain), RAG pipelines, and production deployment (AWS, GCP, Docker). Comfortable working directly with non-technical stakeholders to turn real user needs into shipped features, and setting up lightweight evaluation signals to validate what's working and iterate fast. Strong range across async backend systems, vector search, and queue-based processing (Celery, Redis, AWS SQS).

TOOLS & SKILLS

- **AI & Agentic Systems:** Agentic AI, LangGraph (multi-agent orchestration), LangChain, RAG pipelines, Vector Search & Embeddings, Context Engineering, Structured Outputs, Model Context Protocol (MCP) — Supabase, GitHub, Notion (AI-assisted dev workflows), OpenAI APIs, Sarvam AI APIs (STT, TTS)
- **AI Infrastructure:** FastAPI (production serving), Async Workflows, Background Task Queues, Informal Evaluation & Accuracy Tracking
- **Cloud & DevOps:** AWS (EC2, S3, SQS), GCP, Docker, Linux, CI/CD (GitHub Actions)
- **Data & Messaging:** PostgreSQL, MongoDB, Redis, Vector Databases, Celery, AWS SQS
- **Languages:** Python, JavaScript/TypeScript, SQL

WORK EXPERIENCE

Gen AI Full Stack Development Engineer | Atypical Advantage

Aug 2025 – Present | Remote

- Solely owned end-to-end product development of a publicly deployed, agentic AI-powered tutor built for accessibility-first learning for disabled students — from architecture through backend, deployment, and production monitoring.
- Worked directly with Atypical Advantage's non-technical team to understand how disabled students would actually use the product, translating those needs into concrete, shipped features.
- Architected the complete FastAPI backend from scratch, supporting multi-step agentic workflows and async execution under real user load.
- Built multi-step agentic decision flows in LangGraph, including clarification handling, adaptive response depth, and structured follow-ups tailored to individual learner needs.
- Implemented RAG-based tutoring pipelines to ground responses in course content, improving factual reliability of AI-generated explanations.
- Shipped a voice-driven interaction layer using Sarvam AI's speech-to-text and text-to-speech APIs, extending accessibility for visually impaired and low-literacy learners.
- Instrumented informal evaluation checks, tracking approximate response accuracy/success rate to catch regressions and guide product iteration.
- Deployed and operated the system on AWS, supporting ~50 concurrent users in production.
- Converted from Intern to Full-Time Engineer in April 2026 after continuing the internship through March 2026, retaining full product ownership.

PROJECTS

ProjectFlow — Agentic Project Management Platform

React, FastAPI, LangGraph, Celery, Redis, Supabase (PostgreSQL), Gemini

- Built and fully deployed a department-wide AI evaluation product analyzing 1,000+ students across ~300 project teams.
- Designed a multi-agent GitHub analysis pipeline using LangGraph to orchestrate code quality, architecture, security, and originality checks.
- Engineered scalable background processing with Celery and Redis, enabling parallel processing of ~300 repositories during peak submission windows, with rate limiting and queue control to maintain API stability under load.
- Achieved ~1 minute average analysis time per repository through optimized async execution for batch-heavy workloads.
- Centralized grading, reports, and analytics into a single automated dashboard, reducing manual evaluation overhead for faculty.
- Worked directly with the HOD to understand faculty's evaluation bottlenecks, then designed the product workflow that resolved them.

AI Recruitment Manager — Agentic AI Hiring Platform

FastAPI, Supabase (PostgreSQL), LangChain, OpenAI, Gemini

- Built and deployed a full FastAPI backend with JWT authentication and Supabase integration.
- Designed AI pipelines for resume parsing, job description understanding, and semantic job-fit scoring.
- Implemented a multi-agent LangChain workflow for automated screening, ranking, and interview scheduling.
- Integrated vector search for candidate-JD matching, achieving ~100ms retrieval latency.

EDUCATION & CERTIFICATIONS

GLA University, Mathura, India — B.Tech, Computer Science (AI/ML & IoT)

Aug 2023 – Aug 2027

Microsoft Azure Fundamentals (AZ-900) | GitHub Foundations
